# 樣本資料 - 限聚指數基準調查

## Contact Information - Group Gathering Prohibition Index Benchmark Survey

2

	香港民研意見群組成員 HKPOP Panel
調查日期 Survey date	18/6 15:00 – 23/6 15:00
調查方法 Survey method	以電郵接觸群組成員，並於網上完成調查 Online survey
訪問對象 Target population	十二歲或以上的香港市民 Hong Kong residents aged 12+
總成功樣本 Total sample size	6,158
回應比率 Response rate	6.6%
抽樣誤差 Sampling error	95% 置信水平，百分比誤差 +/-1% Sampling error of percentages at +/-1% at 95% confidence level
加權方法 Weighting method	按照1) 政府統計處提供的全港人口年齡及性別分佈統計數字、各區議會人口數字； 2) 選舉事務處提供的區議會選舉結果；3) 常規調查中的特首評分分佈數字，以 「反覆多重加權法」作出調整。 The figures are rim-weighted according to 1) gender-age distribution of Hong Kong population and by District Councils population figures from Census and Statistics Department; 2) Voting results of District Councils Election from Registration and Electoral Office; 3) rating distribution of Chief Executive from regular tracking surveys.

香港教育中心商會副主席任偉豪指出：「昨天出現一宗疑似本地確診個案，極有可能中斷連續十數日沒有本地個案的局面。但無論如何，九成以上市民依然覺得目前的限聚措施過緊，可能因為大多數市民認為個別個案不會導致大規模感染，而且現有限聚措施已經足夠減低感染風險。可能有人認為新感染個案與周一公佈的放寬措施有關，但事實上，放寬措施是在今天才開始實行，與昨天出現的疑似本地確診個案沒有因果關係，市民無需過份擔心。」

**Vice Chairman of The Hong Kong Chamber of Education Centres Yam Wai Ho observed, “There was a suspected case of local infection yesterday, which may put an end to the many days of zero local infection. In any case, more than 90% of citizens still consider current gathering restrictions too tight, probably because people think that a few isolated cases would not lead to large scale infection, and that the current restriction measures are already sufficient. Some people may think that the new suspected case is related to the relaxation measures announced on Monday, the fact is that such measures would only be implemented today so the two are not related. The public needs not feel too worried.”**
